Full Stack Developer | Software Engineering & Automation

Full Stack Developer with experience designing and building scalable web systems for the financial and corporate sectors. Strong background in both frontend and backend development using React, TypeScript, Django, PHP, and Python. Experienced in developing internal automation frameworks, API integrations, role-based access control systems, audit logging, and dynamic ERP-driven configurations. Focused on clean architecture, reliability, and real business impact.

Experience

Sep/2025 – Present

Full-Stack Developer, Quatrodois – Brazil (Remote)

- Development of modules and new features in corporate systems using Django, Python, and MySQL
- Participation in projects for a large financial-sector company (Multimarcas Consórcios), working on mission-critical production systems
- Implementation of integrations with internal APIs and external services (e.g., digital signature workflows and webhooks)
- Maintenance and evolution of complex business rules involving multiple user profiles and hierarchical permission structures
- Mandatory automated test development for all deliveries, ensuring quality, coverage, and production reliability
- Bug fixing and production support with focus on stability and reliability

Mar/2024 – Present

Full-Stack Developer, Viva Cred – Praia Grande, SP, Brazil (Remote)

- Architecture and development of a complete internal ERP system to centralize operational and financial processes
- Modeling and implementation of the relational database from scratch, structuring business rules and operational control
- Implementation of JWT authentication and role-based access control
- Development of audit logs to ensure action traceability and operational security
- Creation of a proprietary automation framework using Python + Selenium, standardizing the development and execution of corporate bots

- Integration of automations into the ERP with an administrative panel for dynamic configuration (e.g., WhatsApp group definitions, operational rules, and behavior adjustments without redeployment)
- Implementation of version control and licensing system per client/machine
- Automation of critical financial processes used daily by the operations team
- Integration with external CRM (Ecorban) for data synchronization and operational workflows

Sep/2023 – Mar/2024

Information Systems Developer, Backsite Serviços Online – Santos, SP, Brazil (Hybrid)

- Development of a Data Warehouse using PHP/MySQL (MVC) consolidating Mercado Livre seller data and enabling real-time reporting, improving analysis efficiency
- Creation of an e-learning platform from scratch for Tecnoponta, allowing over 1,000 students to access remote content and digital certificates
- Development of a public scheduling system for the São Paulo Tourism Department, significantly reducing event publishing time
- Participation in strategic project planning, ensuring on-time and in-scope delivery

Jan/2020 – Sep/2023

Full-Stack Developer, Viva Cred – Praia Grande, SP, Brazil (On-site)

- Development of the company's public website using React + TypeScript
- Implementation of automations to replace repetitive manual tasks
- Continuous identification and implementation of operational improvements

Technical Skills

- **Front-end:** React, Next.js, TypeScript, JavaScript, Redux, React Router, Tailwind CSS, Bootstrap, Styled Components, HTML5, CSS3
- **Back-end:** Django, Python, PHP, Laravel, Node.js, Flask, REST APIs, JWT
- **Databases:** MySQL, PostgreSQL, SQL Server, MongoDB
- **Tools:** Git, Linux, Postman, Figma, Docker
- **Others:** Agile Methodologies, MVC, Selenium, Playwright, AWS

Education

Jan/2023 – Present

Bachelor's in Computer Science, UNISANTOS – Santos, Brazil

- Actively participate in various programming events, including hackathons and programming competitions.

- Cryptography project: TDE Cryptography, focused on information security practices.
- Data analysis and prediction project: pcg-analyze-energy-costs, built with React and Flask.
- B3 stock market prediction project: pcg-5sem, using technologies such as PostgreSQL, Python, Electron, and React.

Certifications

- **AWS Academy Graduate – AWS Academy Cloud Foundations**

  Issued: 05/27/2025 — Duration: 20 hours
